

Schwab Fundamental US Large Company Index Fund

Investment objective

The Fund seeks investment results that correspond generally (before fees and expenses) to the total return of the Russell RAFI™ US Large Company Index.

Fund highlights

- A straightforward, low-cost fund with no investment minimum
- Simple access to the largest U.S. companies based on fundamental measures
- Tracks an index that selects and weights securities based on three fundamental measures of company size: adjusted sales, retained operating cash flow and dividends plus buybacks
- Provides a complement to market-cap indexing and active management

¹ As stated in the prospectus. These figures may differ from those presented in a fund's shareholder report.

² The Morningstar Rating[™] for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total return, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total return. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account the effects of sales charges and loads.
